

\$120.00 for the plumber.
Oh, well glad it happened
now instead of after the new
baby comes!

1958

Last Friday - 14 Mar - Tracy
got a call from research corp
saying they wanted to apply for
patents before his release on
April 20th as to patent rights to
apply for foreign patents
This is the patent on his
Tetradol-tarvit design which
he will publish a paper next
April Thurs 18th 1958 (date
of his talk) He told them "no"
not until date of talk just
is now trying to read them
to tell them they can apply
the day before the attempt
is released because he has
given quite a bit of detail
in his abstract which he had
forgotten about.

1958

Monday 17 - Went in to cover the
children Charlotte and Virginia and
Virginia must have been dreaming
she was practicing her violin,
because she was counting
1-2-3-4 1-2-3-4 and showing
her fingers just as if she
was playing the violin.

March 31, 1958

at 12 o'clock PM my membranes
ruptured and at 2 o'clock I
started in labor. I tried to
sleep but the contractions kept
me awake so I went into the
b.R. with my pillows and
blanket so I could time contractions
and let Tracy get a little sleep.

at 6:30 I called the Dr and
told him and he said I had
better go to the hospital.

Tracy had a visitor coming
from general motors and
was going to be tied up all
day. He left at 7:30 and
told the nurse to call him when
I went into the delivery room.
The pains kept up all day
but I didn't dilate. When
Tracy came at about 9 o'clock
that night I was still there.
The pains were quite hard
but very irregular. There had
been 2 girls go into delivery
before me that day.

My past history is that
when I go into it's fast and
the baby is born shortly. In
the morning about 10th the
Dr ordered a skal light the
nurse prepared a delivery room
just got would be ready.
Ha! It was used a bit
before I used it.

at 8 I sent Tracy home
I was disgusted. The
pains were harder when they
