

ACKNOWLEDGEMENTS

This thesis is a report of research conducted at the High Pressure Laboratory at Brigham Young University and has been sponsored by a grant from the Air Force Office of Scientific Research (grant no. AF-AFOSR-201-63), given to Dr. Daniel L. Decker and Dr. Howard B. Vanfleet.

Gratitude and appreciation are extended to Dr. Vanfleet and Dr. Decker for their direction and assistance in all phases of the research, and to Dr. Vanfleet for his help in the preparation of the text. Appreciation is also extended to Lloyd Case and Kent Young for their assistance in the laboratory.

Special thanks and gratitude are extended to the author's wife for help in the preparations of the preliminary copies of the manuscript.
