

## LIST OF TABLES

Table		Page
I.	Results of Impact Experiments . . . . .	63
II.	Results of Data Analysis . . . . .	66
III.	Results of Heat Flow Calculation . . . . .	104
IV.	Results of Post-shock Anneal . . . . .	107

## LIST OF ILLUSTRATIONS

Figure	Page
1. Schematic Diagram of Impact Configuration Showing Impactor and Target Assemblies . . . . .	11
2. Details of Foil-Anvil Sandwich . . . . .	15
3. Electronic Measuring System . . . . .	23
4. Analysis Flow Chart . . . . .	26
5. Noble Metal Fermi Surface and First Brillouin Zone . . . . .	34
6. Work of Plastic Deformation vs. Compression . . . . .	50
7. Reverberation States in (t,x) and (P,u) Planes . . . . .	52
8. Hugoniot Temperature Rise vs. Pressure . . . . .	70
9. Oscilloscope Records . . . . .	73
10. Isothermal Resistivity vs. Compression . . . . .	77
11. Deviation Resistivity vs. Pressure . . . . .	78
12. Motion of a Jogged Screw Dislocation . . . . .	83
13. Motion of Jogged Dislocations of Mixed Character at Low and High Speeds . . . . .	85
14. Deviation Resistivity vs. Square of Strain . . . . .	89
15. Logarithmic Plot of Deviation Resistivity vs. Strain . . . . .	90
16. Stress Relaxation Dependence on Purity . . . . .	95
17. Scanning Electron Micrographs (1000X) of Shocked and Unshocked Silver Foil . . . . .	109
A.1. Voltage-Time Profiles . . . . .	119
D.1. Three-Slab Heat Flow Geometry . . . . .	141
