(a) Frequencies which were calculated from fitting the Raman intensity to uncoupled damped oscillators.

(b) $\gamma_i = -\frac{d \ln \nu_i}{d \ln V}$ (mode Grüneisen constant)

(c) $A_i = -\frac{d \ln \nu_i}{d \ln d_{N-X}}$ (where d_{N-X} is nitrogen-halogen distance)

(d) α_{ij} Raman tensor
