

Figure 11. Effect of feed gas steam content and conversion on ratio of methane formation to carbon oxides formation at 1000 p.s.i.g.

this work. Therefore, since there may have been more steam reforming of exit methane in these tests, inhibition by hydrogen may have been obscured.

Acknowledgment

Thanks are due to H. A. Dirksen, W. G. Bair, and S. Volchko for their helpful suggestions in operation and design of the equipment. E. J. Pyrcioch, F. C. Rac, A. E. Richter, and

R. F. Johnson assisted in conducting tests. A. Attari and J. E. Neuzil supervised the analytical work.

RECEIVED for review May 21, 1964
ACCEPTED November 24, 1964

Division of Fuel Chemistry, 147th Meeting, ACS, Philadelphia, Pa., April 1964. Work supported by the Gas Operations Research Committee, American Gas Association, as part of the Promotion-Advertising-Research plan of the association. Work guided by Project PB-23a Supervising Committee under the chairmanship of B. J. Clarke.
