

1951, Vol. 73, pp. 203-208
Discussion Journal of Applied Mechanics, 1951, Vol. 73, pp. 428-429.

The theory of propagation of plastic longitudinal waves is extended to include the strain rate effect on the stress-strain curve.

See also 1052. Bibliography contains 30 references.

ON THE IMPACT BEHAVIOR OF A MATERIAL WITH A YIELD POINT
Journal of Applied Mechanics, Trans. ASME
1949, Vol. 71, pp. 39-52
Discussion Journal of Applied Mechanics, 1949, Vol. 71, pp. 318-319.

A very complete analysis is made of impact behavior of materials with a yield point. The theory of plastic wave propagation and the combination of plastic and elastic waves is presented very clearly.

THE PERMANENT STRAIN IN A UNIFORM BAR DUE TO LONGITUDINAL IMPACT
Journal of Applied Mechanics, Trans. ASME
1947, Vol. 69, pp. A-337-343.

A method is presented for giving the final distribution of strains in a uniform bar subjected to a plastic impact. The wave propagation theories are used in the development. The presentation is very basic from the standpoint of interpretation of impact stresses and strain in cylindrical specimens.

AN INVESTIGATION OF THE PLASTIC BEHAVIOR OF METAL RODS
SUBJECTED TO LONGITUDINAL IMPACT
Journal of Mechanics and Physics of Solids
1953, Vol. 1, pp. 113-123.
- A dynamic stress-strain relation is obtained for an aluminum alloy. An SR-4 type strain gage is mounted on the specimen. The specimen is in the form of a long rod. Successively larger impacts are imparted to the specimen to obtain a stress-strain curve. Impact is applied to a steel rod then transmitted into the specimen. The effect of the steel rod is to increase the applied stress and also separates the flexural and longitudinal components due to differences in velocity of propagation.
