

Table 31. Average values of the partial specific volume, \bar{v}_2 , the corresponding temperature and also the compression of the partial specific volume given as $\bar{k} = bp + cp^2$ in Eq. (29).

To a good approximation, $b \cdot 10^5$ can then be regarded as the relative decrease of the partial specific volume in per cent per 1000 atm. The concentration dependence of the density according to Eq. (21), $\rho_{x_2} = \rho_0 + Ex_2$, is also given, with the concentration expressed as a weight fraction.

Substance	Solvent	Temperature °C	\bar{v}_2 at 1 atm ml/g	$b \cdot 10^5$ atm ⁻¹	$-c \cdot 10^9$ atm ⁻²	E g/ml	Table No.
Cellulose acetate co-butyrate	sym-Tetrachloroethane	22.7	0.777	2.48	1.22	-0.378	17
Cellulose triacetate	sym-Tetrachloroethane	21.9	0.744	2.66	1.82	-0.297	17
Dextran	Water	20.9	0.600	0.23		0.400	17
Methyl cellulose	sym-Tetrachloroethane	21.9	0.864	2.88	1.34	-0.601	17
Glucose	Water	21.0	0.620	0.03		0.381	17
Hydroxyethyl cellulose	Water	19.2	0.678	1.05		0.323	17
Nitrocellulose	Ethyl acetate	21.3	0.556	0.43		0.449	17
Nylon	95-100 % Formic acid	22.4	0.890	1.96		-0.101	23
Poly- <i>n</i> -butyl acrylate	Methyl isobutyl ketone	23.3	0.944	3.24	1.88	0.197	22
Poly- <i>n</i> -butyl methacrylate	Methyl isobutyl ketone	21.2	0.922	2.84	1.33	0.210	22
Polydimethylsiloxane	Toluene	22.4	1.024			0.100	24
Polyethyl acrylate	Methyl isobutyl ketone	24.3	0.951	3.65	2.27	0.193	22
Polyethylene glycol $M_v = 240$	Water	23.0	0.846	1.07		0.156	23
$M_v = 470,000$	Water	22.8	0.834	0.98		0.167	23
Polyethyl methacrylate	Methyl isobutyl ketone	22.9	0.863	2.60	1.08	0.248	22
Polyisobutylene $M_v = 52,000$	<i>n</i> -Octane	20.9	1.072	2.54	1.21	0.174	23
$M_v = 1,600,000$	<i>n</i> -Octane	23.2	1.069	2.41	1.34	0.177	23
$M_v = 9,600,000$	<i>n</i> -Octane	20.7	1.075	3.17	3.36	0.172	23
Polymethacrylic acid	0.01 M HCl pH 2.0	21.3	0.712	0.94		0.289	18
Polyethyl methacrylate	Methyl isobutyl ketone	21.8	0.816	2.18	0.72	0.278	22
