Attn: Mr. H. Tracy Hall
Director of Research

Gentlemen:

We are enclosing with this letter a larger sample of the one mil stainless steel foil which you requested, coated with A418 ceramic material.

This type of job can also be done with less refractory glasses on aluminum foil, but has not been done on plain carbon steel foils.

You are welcome to experiment with the sample enclosed. Please let us know if we can be of further assistance, and if any of the information concerning your experiment is published, we would appreciate receiving a copy.

Very truly yours,

A handwritten signature in blue ink, appearing to read "H. V. Penton", written over a faint, larger version of the same signature.

H. V. Penton
Vice President

HVP/mp
